

Post Doctoral Fellows

Albee Messing lab

Openings available immediately in NIH-funded laboratory to study (1) cellular and molecular mechanisms underlying the pathogenesis of Alexander disease, and 2) therapeutic strategies for amelioration of GFAP-mediated astrocyte dysfunction. PhD in cell biology, genetics, pharmacology, toxicology, or neuroscience is required. Experience in pharmacokinetics/pharmacodynamics is highly desirable. Interested candidates should e-mail their current CV, a statement of research interests and career goals, and a list of three references to: Dr. Albee Messing (messing@waisman.wisc.edu).
