MAJOR CONCLUSIONS:

- Vocal tract dimensions and acoustic measurements obtained using both ART and CT are reliable and comparable.
- The data is a promising pilot study that can be further developed to understand the effects of body position on vocal tract dimensions.

ACKNOWLEDGMENTS:

- This work was supported in part by the National Institute on Deafness and Other Communication Disorders (NIH Grant DC010440). Additional support was provided by the National Science Foundation (NSF Grant BCS-1028707) and the Wisconsin Alumni Research Foundation (WAF 1778264).
