Welcome and Introduction to the Waisman Center
William MacLean, PhD, Interim Director, Waisman Center

Maximizing Gains Toward Communication Goals: Putting the “Fun” in Functional Speech and Language Therapy for Individuals with Down Syndrome
Kayla Kristensen, MS, CCC-SLP, Associate Clinical Speech-Language Pathologist, Waisman Center
One exciting way to maximize the impact of speech and language therapy is to work as a team to connect evidence-based speech and language strategies to community practice opportunities. This presentation will highlight partnership opportunities between individuals with Down syndrome, families, team members, and speech-language pathologists.

Alzheimer’s Disease: Aging and Down Syndrome
Sigan Hartley, PhD, Associate Professor, Human Development & Family Studies and Waisman Investigator
Down syndrome, estimated to occur in 1 in 691 live births, is a neurodevelopmental condition most commonly due to a third copy of chromosome 21. With advancements in health care over the past decades, a growing number of adults with Down syndrome are living into their 60s and beyond. Adults with Down syndrome evidence early aging, including high incidence and early onset of Alzheimer’s disease. Virtually all adults with Down syndrome show evidence of the neuropathology of Alzheimer’s disease in their 40s and about half of adults with Down syndrome exhibit dementia by their mid 60s. In contrast, only 5% of adults in the general population exhibit Alzheimer’s dementia before age 65 and only 33% of adults in the general population over the age of 85 exhibit dementia. In this presentation, we will discuss the earliest signs of Alzheimer’s disease in adults with Down syndrome, the course of the disease, and strategies for caregivers.

Enhancing Mealtime Participation for your Child with Down Syndrome
Sharon Gartland, OTD, OTR/L, Occupational Therapist, Waisman Center Clinics
Mealtimes function as one of the cornerstones of family life. Eating together is when we connect and celebrate with each other as well as take in our daily nutrition. How can families best approach mealtimes when there are added challenges such as oral motor and fine motor difficulties, sensory sensitivities, behavioral stressors and multiple distractions? This presentation will provide an overview of barriers that often exist and suggestions to begin supporting more successful participation for everyone during mealtimes.

Question and answer session with a panel of clinicians
